

Royal Jubilee Hospital Patient Care Centre

The largest LEED Gold hospital in Canada, the Royal Jubilee Hospital Patient Care Centre is a Public-Private Partnership project between the Vancouver Island Health Authority and the ISL Health Consortium (H H Angus & Associates as mechanical and electrical consultants). Located in Victoria, the eight-storey, 500-bed facility is an addition to the Royal Jubilee Campus, one of two main healthcare facilities servicing Vancouver Island. The building was designed to be forward-looking, elder-friendly, environmentally friendly, sustainable, and a magnet hospital for staff recruitment and retention. Using 100% fresh air ventilation, as well as other innovative mechanical, electrical and architectural design, this facility is the first Pacific Green building on Vancouver Island, setting a high standard for all sustainable healthcare facilities in Canada.
